

STRIDE · USER GUIDE

Command Center Guide

ADMIN

Everything you need to run your association on Stride — members, staff, scheduling, billing, compliance, and crisis response, all from one command center.

Stride Association Management Platform · Document version 1.0

9.	Privacy, compliance & data	
10.	Troubleshooting & FAQ	

1. Getting Started & First-Time Setup

As an Admin, you are the operator of your association's entire presence on Stride. This section walks through what to do in your first session.

1.1 Your first login

When you sign in as an Admin for the first time, Stride opens directly into your **Setup** screen rather than the regular dashboard. This is a guided checklist designed to get your association ready to accept its first members before you do anything else.

TIP

Work through the Setup checklist in order. Several later steps (such as inviting staff) depend on earlier ones (such as creating your first course) being completed first.

1.2 The Setup checklist covers

- Your organization's basic profile (name, contact details)
- Your branding — logo and color palette (see Section 8)
- Creating your first course or class type
- Inviting your first staff member as an Operator
- Reviewing your Privacy Policy and Terms & Conditions, which every member must accept before they can use the app (see Section 9)

1.3 Trial period

New organizations start on a 14-day trial. During the trial, a small banner appears for members reminding them the association is in trial mode. Once you activate a paid plan (see Section 8.2), the banner is removed and full branding customization unlocks.

TIP

You can extend or offer a custom trial period to specific people using promo codes (Section 5.3) — useful for marketing campaigns or trialling with a second branch before committing.

2. Understanding Roles & Permissions

Stride has four roles. As Admin, you can see and act as any of them — this is intentional, so you can check exactly what a Member or Operator sees without needing a second test account.

Role	Who it's for	What they can do
Admin	You — the association owner/manager	Full control: members, staff, finance, branding, compliance
Operator	Teachers, coaches, instructors	Day-to-day class management, attendance, safety tools
Member	Parents/guardians (or adult participants)	Bookings, payments, documents, their children's progress
Kiosk	A shared tablet at your front desk	Unattended check-in/out station — see the separate Kiosk Guide

2.1 Promoting and changing someone's role

Go to [Members hub → Manage Users](#), find the person, and use the role switch to grant or remove Admin or Operator access. A Member can be promoted to Operator (e.g. a parent who becomes a teacher), and an Operator can be promoted to Admin if you want to share full management duties with a co-director.

TIP

When you promote someone, they will see a confirmation the next time they open the app and a new role switcher will appear letting them move between their roles if they hold more than one (for example, someone who is both a parent and a teacher).

2.2 Delegating advanced permissions to trusted Operators

By default, Operators only manage their own classes and attendance. From an Operator's profile in [Members hub → Manage Users](#), you can unlock additional permissions for staff you trust with more responsibility:

- **Propose new courses or workshops** — the Operator can draft a new course, which then waits for your approval before it becomes bookable by Members
- **Manage private lessons** — accept and schedule one-on-one bookings independently
- **Edit or cancel calendar sessions** — reschedule or cancel their own classes without needing to come to you first

2.3 The legal gate — nobody slips through

Stride will not let a new Member use the app until they have explicitly accepted your Privacy Policy and Terms & Conditions. This is enforced automatically during their onboarding — you do not need to chase signatures manually. You can see who has and hasn't signed required documents at any time in [Members hub → Document & Certification Overview](#).

3. Members Hub

The Members hub is your control center for everyone enrolled in your association — their accounts, their compliance documents, and your security tools.

3.1 Manage Users

[Members hub → Manage Users](#) lists every person in your organization. From here you can:

- Search and filter members
- View and change someone's role (see Section 2.1)
- Suspend an account (temporarily blocks access without deleting their data)

3.2 Invitations

[Members hub → Invitations](#) lets you generate and send invite codes/links so new families or staff can join your organization directly with the right role already assigned. You can revoke an invitation code at any time before it is used.

3.3 Blacklist

For situations where someone should be permanently denied access to your association (for example, after a serious incident),

[Members hub → Blacklist](#) lets you block a person by email, phone number, or name. A blacklisted person cannot register or be re-invited until removed from the list.

USE WITH CARE

Blacklisting is a serious action typically reserved for safety or conduct issues — for routine cases (e.g. someone leaving the association amicably), simply leave their account as-is or suspend it instead.

3.4 Documents & Certification Overview

[Members hub → Document & Certification Overview](#) gives you a single view of every required document across your organization — signed Terms & Conditions, Privacy consent, and medical certificates for students — flagging anything expiring soon or already expired so you can follow up before it becomes a problem at check-in.

3.5 ID Badges (PDF)

[Members hub → ID Badges](#) generates printable PDF badges containing each member's personal QR code — useful if your association prefers a physical card or lanyard badge in addition to the digital Smart Pass in the app. You can print a single badge, a full sheet, or a grid layout for bulk printing.

3.6 Security Alerts

[Members hub → Security Alerts](#) is where you review system-wide safety flags — see Section 6 for how the escalation system that feeds this screen works.

4. Operations Hub — Scheduling, Staff & AI Tools

4.1 Scheduling

Screen	What it's for
Activity Wizard	Step-by-step creation of a new recurring class, single workshop, or special event, including location.
Activity	Browse and manage all scheduled activities by month.
Lessons	Manage individual lesson instances — reschedule, cancel, or edit a specific session.
Disciplines	Define the types of classes you offer (e.g. Ballet, Jazz, Gymnastics) used throughout scheduling and enrolment.
Manage Courses	The full course catalogue — pricing, age groups, capacity.
Calendar Management	A month-at-a-glance view across your whole organization.
Schedule Requests	Approve or decline schedule changes proposed by Operators with editing permissions (Section 2.2).

4.2 Staff

[Operations hub → Staff hub](#) is the dedicated area for managing your Operators: their certifications, their schedules, and (via Manage Users) their permissions.

4.3 AI Roster Orchestrator PREMIUM

[Operations hub → Smart Roster](#) uses AI to help build and adjust class rosters and to suggest substitute staff. When an Operator reports an absence, the AI Query Optimizer here can rank up to three suitable substitutes based on their availability, matching discipline/qualification, and cost — using it is optional and the suggestion is just that: a suggestion. You always make the final call before assigning anyone.

TIP

This is a recommendation tool, not an auto-assignment system — no substitute is booked until you confirm it.

4.4 AI Copilot PREMIUM

[Operations hub → Copilot](#) lets you ask plain-language questions about your organization's data and get an instant answer, instead of digging through reports manually. For example, you can ask things like "who hasn't paid this month", "which medical certificates are expiring", or "how many absences did [operator] have this year". The Copilot understands the question, looks up the real data, and shows you a structured answer.

TIP

The Copilot only reads data — it never makes changes to your organization on your behalf.

4.5 BLE Proximity Check-in (Beacons) PREMIUM

For associations with a fixed venue, [Operations hub → Beacons](#) lets you set up automatic, hands-free check-in using Bluetooth beacons. A small Bluetooth scanner at your venue (for example a tablet or a Raspberry Pi placed at the entrance) detects a child's wearable tag automatically as they arrive, logging their check-in without anyone needing to scan a QR code.

- Register your venue's BLE scanner(s) as zones
- Assign a beacon tag to each child who will use it
- Check-ins triggered this way are clearly labelled "Detected via Proximity" so your Operators always know which check-ins were automatic versus manually scanned

4.6 QR Gate

[Operations hub](#) → [QR Gate](#) manages ticketed entry for events — useful for shows, recitals, or open days where you are selling or issuing entry tickets separate from regular class attendance.

4.7 Check-in Terminals

[Operations hub](#) → [Terminals](#) is where you register and manage the tablets you'll use in Kiosk mode at your front desk (see the separate Kiosk Guide).

4.8 Analytics

[Operations hub](#) → [Analytics](#) gives you trend data across attendance, revenue, and enrolment over time, beyond the quick snapshot on your home dashboard.

5. Finance Hub — Invoicing, Billing & Promotions

5.1 Invoicing

Screen	What it's for
Expenses	Track association expenses (venue rental, supplies, etc.) for your own bookkeeping.
Invoices	View and manage invoices issued to members.
Payout Settings	Configure how and when your association receives funds collected through the app.
Reimbursements	Track and process reimbursements owed to staff (e.g. paid operator expenses).
Pending Payments	Confirm cash or offline payments that haven't been processed automatically through the app.

5.2 Billing & subscription

[Finance hub](#) → [Subscription & Billing](#) is where you manage your own Stride subscription plan. [Stripe Connect](#) links your association's bank account so member payments flow directly to you. [Regional Pricing](#) lets you adjust membership fees for different regions if your association operates across more than one area.

5.3 Promotions

[Finance hub](#) → [Promo Codes](#) is your growth engine for trials and marketing campaigns. You can generate codes (for example STRIDEFREE14) that grant a free trial period to whoever redeems them — useful for local marketing pushes, open-day sign-ups, or partner referrals. [Family Discount](#) lets you configure automatic discounts for households with multiple enrolled children. [Invite & Earn](#) rewards existing members for referring new ones.

5.4 Marketplace & Events

[Finance hub](#) → [Marketplace](#) lets you sell merchandise or link to external shops directly from the app. [Events](#) and [Fee Events](#) manage ticketed or fee-based special events (recitals, showcases, competitions) separately from regular recurring classes.

6. Crisis & Safety Escalation

This is one of the most important parts of Stride for any organization working with children. It is worth understanding exactly how it behaves.

6.1 Missed check-in / check-out escalation

If a child is scheduled for a class but is not scanned in (or not scanned out at the end), Stride automatically escalates in three phases so a missed child is never quietly overlooked:

- **Phase 1 — immediately:** a notification is raised for the missed check-in/out.
- **Phase 2 — at 5 minutes:** the alert becomes high-priority if still unresolved.
- **Phase 3 — at 10 minutes:** if still unresolved, an alarm sounds on the Admin's device — a deliberately loud, attention-grabbing tone designed to force immediate human attention.

WHY THIS MATTERS

This system exists so that a forgotten pickup or a missed check-in is caught within minutes, not discovered at the end of the day. As Admin, treat a Phase 3 alarm as requiring immediate action — locate the child or confirm the situation before doing anything else.

6.2 Resolving an alert

From [Members hub → Security Alerts](#) (or directly from the alarm screen when it triggers), you can resolve an alert once you've confirmed the situation — for example, the child was checked in manually after a scanner issue, or the absence was already expected and recorded.

6.3 Operator absence and substitutes

When an Operator reports they will be late or absent (from their own app — see the Operator Guide), you'll see it reflected in your scheduling screens. Use the AI Roster Orchestrator (Section 4.3) to get ranked substitute suggestions, then confirm a replacement yourself — this part of the system is a recommendation tool, not an automatic chain of escalation with its own timers.

6.4 SOS from Operators and Members

Operators and Members both have access to an SOS button for genuine emergencies (double-tap within 3 seconds to trigger). When triggered, you receive a priority notification with the sender's GPS location. There is also a silent variant (press and hold for 3+ seconds) that sends the same alert without any visible or audible confirmation on the sender's device — intended for situations where drawing attention could make things worse.

7. Reports & Data Exports

When you need data outside the app — for your accountant, for a board meeting, or for your own records — Stride offers CSV exports from three screens (CSV opens directly in Excel, Google Sheets, or Numbers):

Where	What you get
Finance hub → Expenses → Export	All recorded association expenses, ready for bookkeeping.
Operations hub → Calendar Management → Export	Your full schedule across the organization.
Operations hub → Analytics → Export	Attendance and member data for the period you're viewing — useful for trend analysis or year-end reporting.

7.1 Importing members

If you're moving from another system, [Members hub → Manage Users → Import](#) accepts a spreadsheet (CSV or Excel) of your existing members so you don't have to add everyone one by one.

8. Branding & Subscription

8.1 Branding your app

From your Setup checklist or [Settings → Branding](#), upload your association's logo and set your brand colors. Once you're on a paid plan, your branding replaces Stride's default look for all your members — they see your logo and colors throughout the app. Your logo also appears in the center of every member's QR check-in pass automatically.

8.2 Subscription plans

Stride is offered across Core, Plus, and Premium tiers. The AI Roster Orchestrator, AI Copilot, and BLE Proximity Check-in (Section 4) are Premium features. Manage your plan from [Finance hub → Subscription & Billing](#).

TIP

Features marked **PREMIUM** in this guide require an active Premium subscription. If a screen appears locked, check your current plan first.

8.3 Message templates

[Settings → Messages → Templates](#) lets you customize the text and delivery channel (In-app / Push / Email) for 11 automated messages Stride sends on your behalf — welcome messages, payment reminders, certificate expiry alerts, and more. Edit the subject and body to match your association's tone, and choose which channels each message uses.

9. Privacy, Compliance & Data

9.1 Consent is enforced automatically

No member can use the app without first accepting your Privacy Policy and Terms & Conditions. You control the content of these documents from [Settings → Legal & Privacy](#) and can update them at any time — members will be asked to re-accept on their next login.

9.2 What Operators can and cannot see

Operators see only the information they need for safe day-to-day management: a student's allergies, emergency contact, and attendance record. They do not see home addresses, full financial history, or family account details. This minimizes the data exposed to staff and reduces your organization's risk.

9.3 Secure check-in passes

Every member's QR check-in pass is a cryptographically signed, time-limited token (valid 24 hours, auto-refreshed while the app is open). A copied or hand-written QR cannot pass verification — the server rejects any pass without a valid signature immediately, before any other check is performed.

9.4 Your responsibility as Admin

IMPORTANT

Stride provides the tools to collect consent, store documents securely, and restrict access appropriately — but you, as the association, remain responsible for ensuring your Privacy Policy and Terms & Conditions reflect the laws that apply where you operate (Australian Privacy Act in Western Australia, GDPR in the EU/Italy). When in doubt, have your policies reviewed by someone familiar with your local regulations before publishing them in the app.

10. Troubleshooting & FAQ

A parent says they can't check in their child — the QR scan shows an error.

Check [Members hub → Document & Certification Overview](#) first — the most common causes are an expired medical certificate or an unpaid membership fee, both of which block check-in by design. If the record looks fine, ask the parent to open the app to refresh their QR pass (passes auto-refresh but require a connection), then try scanning again.

I promoted someone to Operator or Admin but they say they still don't have access.

Ask them to fully close and reopen the app, or sign out and back in. Role changes take effect on their next login.

An Operator says they can't edit or cancel their own class.

By default, Operators cannot edit calendar sessions — this is a permission you grant individually per Operator. See Section 2.2 to enable it for that person.

A security alarm went off on my device — what do I do?

Treat it as urgent — see Section 6.1. Locate the child in question or confirm the situation with the on-site Operator, then resolve the alert from [Members hub → Security Alerts](#) once confirmed safe.

The substitute cascade started but nobody has responded — what do I do?

If no substitute accepts within 15 minutes, you will receive an urgent push notification. From there you can cancel the class (automatic notification to all enrolled families), reschedule it to another time/date/location, or process a refund. The decision is entirely yours — the system escalates to you and waits.

Where do I go for help not covered here?

[Operations hub → Help & Support](#) connects you directly with Stride support.
